

# Maximize Earnings on Your Proxy Sites

## Using CPA to Increase Your Profits

Are you ready to increase profits on your web proxy? This guide is a 100% legit method that you can use to at least **DOUBLE** the profits on your web proxy. If you want to start your own web proxy you can download the script for free at <http://www.Glype.com>

First, what exactly is CPA? CPA stands for Cost-Per-Action. What this means is, when a visitor of yours completes an action you will be rewarded with revenue. Now, you may be thinking to yourself “How much do you earn per action?” This varies on a few different factors such as what country your visitors are in and exactly what offers they complete. The company will automatically add new surveys and other action ads on an almost daily basis. The average payout is somewhere around \$0.40 per lead.

### Steps to Get Started

Step 1: First, you need to sign up with the CPA provider. The [Incentive CPA Network](#) created a program that will implement perfectly into your web proxy.

(The Incentive CPA Network is a trusted CPA provider. They pay out once per month (30 day hold) via paypal, check, or wire. We have always used them and have always been paid on time. They have excellent support and are our first recommendation for maximizing your profits on your web proxy.)

Step 2: Now that you have signed up with the [Incentive CPA Network](#) you need to login and create the gateway code you will place on your proxy site. Visit their homepage and input your email address and password into the boxes to login.

Step 3: The third step is to create the gateway for your web proxy. In the top menu click “My Gateway.” Once this page loads completely click the “Create New Gateway” icon.

- The first option is to select a background that will display the CPA offers. You can experiment with different backgrounds or just leave it alone and click “Continue.”
- The second option is basically the preferences. *Gateway Opacity Level* is the contrast of the background you selected on top of the proxified page. (You will see what we mean later). I suggest changing it from 80% to about 50%.
- The third option is the offers page text configuration. You can change this or leave it alone, click “Continue.”
- Fourth option is pretty simple; you can alter the text of the offers page if you wish. Some people choose to change the text to something like “please complete a survey to continue surfing for free.” You can change it or simply leave it be and click “Continue.”
- Next, you will need to edit the “Access Time.” Access Time is the length of time a user will have access to your site after completing a survey. Select number of days. 0 days means the user will have access to your site from their computer forever. We usually set this to “7.” The *Tease Time* is basically the amount of time the user can use the proxified page before the cpa offers appear. We usually set this to “5.” Now, simply click “Continue.”

- We are almost done. The sixth option is dealing with the countries. You do not need to change any settings here other than checking the box at the very bottom titled “**Allow protected content (Bypass).**” Then click “*Continue.*”
- The seventh option allows you to give your users the option to close the offers page without completing an offer. We suggest **not** checking this box. If you do, you will lose profits. Then click “*Continue.*”
- Next you need to give your gateway a name. For the Gateway Name we suggest putting your domain name (abcd.com). This way you can point it out in the stats. Leave the description blank and click “*Continue.*”
- The final step is to click the button titled “**I Agree, Create This Gateway**” on the next page.

## SAVE YOUR GATEWAY CODE

Congratulations, you have just created your CPA lead gateway code and you are now ready to put it into your web proxy and start doubling your profits! Take the gateway code shown in the box and save it in notepad or just leave the window open.

In order to make maximum profit from this it is best to put the gateway code onto your proxified page. This way it gives the visitor incentive to complete your offers. Since they have already used your proxy and are already browsing the proxified page for the amount of seconds you listed in your gateway configuration (*Tease Time*) the odds of them completing an offer is much higher. Continue reading to learn exactly where you need to place your gateway code.

### Installing your Gateway Code into your web proxy

If you are using Glype then please follow these instructions

- Login to your proxy admin section (<http://www.yourwebsite.com/admin.php>)
- Once you are logged in click “*Edit Settings*” in the top menu.
- Scroll down and find the setting for “*Footer Include.*” Put your **Gateway Code** in there and save the changes. You are now set to go and can test this by visiting your web proxy and browsing to a site of your choice. Let it sit for the Tease Time and you should see the offers page appear.

If you are using the free PHPProxy script then follow these instructions

- Login to your site via FTP
- Go into your www folder and open the index.php page
- Search for this line of code: `'<table border="0" width="100%" cellpadding="0" cellspacing="0">`
- It should be at almost the end of the page. After that line place your **Gateway Code** and save the file.

- You are now set to go and can test this by visiting your web proxy and browsing to a site of your choice. Let it sit for the Tease Time and you should see the offers page appear.

If you are using a different type of web proxy then you would basically want to place your Gateway Code in the same location as the code for your PPC ads on the proxified pages, **NOT** on the homepage.

That pretty much sums it up. You have now created an [Incentive CPA Network](#) account and created a gateway for your first proxy. Just follow the same steps and create a gateway for each of your proxy sites. Then, implement into each of them and watch your profits rise. If you have any questions about anything please feel free to contact FPForum on any of the boards.
